Subject: New Seasons Epcon Project

Todd Scott of Charis Homes built our custom, energy efficient home in Green. We were extremely satisfied with the quality of construction and materials used. Customer support was always available, and we often spent quality time discussing our project with Todd. We love our new home, and the Home Builders Association did too because they presented our home with an award. We built in Green because we were impressed by its image as a residential community. Today, Green is rapidly losing its family friendly image to commercialization. The New Seasons Epcon Project is needed to restore the balance of residential to commercial construction. We strongly recommend that the City Council approve the Epcon Project. We are available to show you our beautiful home or speak to the contents of this letter.

Sincerely,

Ralph and Shirley Tucker
